Professional Summary

Data Engineer with 4 years of experience designing and optimizing scalable ETL pipelines using **Databricks**, **PySpark**, **Python**, **SQL**, and **Delta Lake**. Experienced in building enterprise data pipelines, data transformation, automated data quality validation, performance optimization, and production support. Working knowledge of **Azure Data Factory (ADF)**, **ADLS Gen2**, and **Azure Databricks**, with understanding of end-to-end cloud-based data engineering workflows. Certified **Databricks Data Engineer Associate** with experience in large-scale data processing and reliable data engineering solutions.

Technical Skills

Programming Languages: Python, SQL, PySpark

Data Engineering: ETL Development, Data Pipelines, Data Processing, Data Quality Validation

Big Data & Processing: Apache Spark, Databricks, Delta Lake

Azure: Azure Data Factory (ADF), ADLS Gen2, Azure Databricks

Cloud: Microsoft Azure, AWS S3

Orchestration: Azure Data Factory, Databricks Workflows

Practices: Production Support, Pipeline Monitoring, ETL Pipeline Development, Workflow Automation, Dev → QA → Production Migration, SQL Query Optimization

Professional Experience

Associate Data Engineer

July 2022 – Present

Cognizant Technology Solutions

Client: Amgen Inc.

- Developed and maintained **20+ Databricks ETL pipelines** processing **5M+ records daily**, improving data availability and reducing manual intervention by **40%**.
- Developed **PySpark transformation pipelines** to cleanse, transform, and integrate enterprise datasets, improving pipeline reliability and reducing manual processing effort.
- Developed an understanding of **Azure Data Factory (ADF)** for data orchestration, including pipelines, activities, linked services, datasets, Integration Runtime, parameters, variables, and triggers.
- Developed an understanding of **ADLS Gen2** as a scalable cloud storage layer, including hierarchical namespace, RBAC, ACLs, and secure data access.
- Gained conceptual understanding of end-to-end **Azure data engineering architecture**, including **ADF** for orchestration, **ADLS Gen2** for storage, and **Azure Databricks** for data transformation and processing.
- Utilized **Delta Lake** features including **Time Travel**, Versioning, and **ACID transactions** to support data auditing, rollback, and reliable production deployments.
- Designed **incremental loading** strategies using **Delta Lake MERGE** operations for **multi-million-row datasets**, eliminating full table reloads and significantly reducing processing time and compute cost.
- Optimized complex **SQL queries** for large-scale data transformations and validation, reducing query execution time by approximately **30%** while improving downstream reporting performance.
- Built a reusable **PySpark-based data quality validation framework** performing completeness, consistency, reconciliation, and accuracy checks across multiple source datasets, reducing repetitive validation effort.
- Managed **end-to-end migration** of **ETL workflows** across Development, QA, and Production environments while ensuring data integrity throughout release cycles.
- Performed end-to-end **data validation** using **SQL** and **PySpark** to reconcile source and target datasets, ensuring data accuracy before production deployments.

Certifications

Databricks Certified Data Engineer Associate

Credential ID: 1722580787

Education

Rajalakshmi Institute of Technology

2018 – 2022

Bachelor of Engineering in Electronics and Communication Engineering

CGPA: 8.13/10
